Network+ Certification

The Network+ Certification, sponsored by Computing Technology Industry Association (CompTIA), certifies the knowledge and skills of networking technicians in the IT industry. Network+ Certification ensures the candidate of possessing the knowledge required to install and configure the TCP/IP clients. This exam covers a broad range of vendor and product-neutral networking technologies that can also serve as prerequisite for vendor specific certifications such as Cisco Certified Network Associate (CCNA) and Microsoft Certified Systems Engineer (MCSE). Network + certified professionals gain an advantage in IT industry for having acquired the skills required to effectively install, configure, manage and maintain modern computer networks.

Course Highlights

The Network+ Certification course consists of one comprehensive exam. Topics covered in the course include Network Topologies; Network Operating Systems; OSI Model; Network Communication Protocols such as TCP/IP; Network Installation Upgrades and Troubleshooting; and Network Administration, Security and Remote Access. This course will cover the following modules that are required for the Network + Certification exam.

- Media and Topologies
- Protocols and Standards
- Network Implementation
- Network Support

Duration

The Network+ Certification course consists of 42 hours of classroom hands-on training. It can be completed in 6 days (full-time) or 7 weeks (part-time).

Who can attend this course?

The Network+ Certification course is recommended to individuals who want to advance their careers and marketability in the field of computer network support and service. A basic working knowledge of computers and the Windows operating system is a useful background for individuals considering Network+ Certification.

Certification Requirements

Network+ Certification requires that the candidate pass one exam. This exam can be taken at any Prometric or VUE Testing Center.

Job Prospects

A candidate with Network+ Certification qualifies for Network Administrator, Help Desk and Technical Support Staff for networking in the IT industry.
